Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Light::Ambient
Raytracer::Camera
Raytracer::CameraBuilder
Color
Primitive::Cone
Optimisation::Cube
Optimisation::cubeCollider
Primitive::Cylinder
Light::Directional
Raytracer::DLLoader
Raytracer::Factory
FlatColor
Light::ILight
Material::IMaterial
Primitive::IPrimitive
Light::LightsContainer
Optimisation::Octree
Raytracer::Scene::ParserException
Primitive::Plane
Light::Point
Primitive::PrimitivesContainer
Raytracer::Ray
Ray class, (point and direction vectors)
Raytracer::Rectangle3D
Primitive::RectangularCuboid
Raytracer::Renderer
Raytracer::Scene
Primitives::Shadow
Primitive::Sphere
Primitive::Triangle
Math::Vector3D
Vector 3D class (x, y, z)

Class Documentation

3.1 Light::Ambient Class Reference

Inheritance diagram for Light::Ambient:

Collaboration diagram for Light::Ambient:

Public Member Functions

· Ambient ()

Construct a new Ambient object.

· Ambient (double multiplier, double diffuseMultiplier)

Construct a new Ambient object.

∼Ambient ()=default

Destroy the Ambient object.

• double getMultiplier (void) const

Get the Multiplier number of ambient light.

• void setMultiplier (double multiplier)

Set the Multiplier object.

• double getDiffuseMultiplier (void) const

Get the Diffuse Multiplier number of ambient light.

void setDiffuseMultiplier (double diffuseMultiplier)

Set the Diffuse Multiplier object.

• Light::LightType getType (void) const override

Get type of Light.

• Color getColor (void) const override

Get the Color object.

 Color computeColor (Math::Vector3D primitiveNormal, const Math::Point3D &hitPoint, Math::Point3D color, const Primitives::Shadow &shadow) const override

compute the color point with ambiant light

3.1.1 Constructor & Destructor Documentation

3.1.1.1 Ambient()

Construct a new Ambient object.

Parameters

multiplier	Multipler of ambient light
diffuseMultiplier	Diffuse Multipler of ambient light

3.1.2 Member Function Documentation

3.1.2.1 computeColor()

compute the color point with ambiant light

Parameters

primitiveNormal	normal to the hitpoint
hitPoint	hitpoint
color	color
shadow	Primitive::Shadow class to handle shadows

Returns

Color color

Implements Light::ILight.

3.1.2.2 getColor()

Get the Color object.

Returns

Color

Implements Light::ILight.

3.1.2.3 getDiffuseMultiplier()

Get the Diffuse Multiplier number of ambient light.

Returns

double

3.1.2.4 getMultiplier()

Get the Multiplier number of ambient light.

Returns

double

3.1.2.5 getType()

Get type of Light.

Returns

The type of the light

Implements Light::ILight.

3.1.2.6 setDiffuseMultiplier()

Set the Diffuse Multiplier object.

Parameters

3.1.2.7 setMultiplier()

Set the Multiplier object.

Parameters

multiplier Multipler of ambient light to set
--

The documentation for this class was generated from the following files:

- include/Lights/Ambient.hpp
- · src/Plugins/Lights/Ambient/Ambient.cpp

3.2 Raytracer::Camera Class Reference

Public Member Functions

· Camera ()

Construct a new Camera object.

Camera (const Camera &other)

Construct a new Camera object.

• Camera (Math::Point3D origin, Rectangle3D screen)

Construct a new Rectangle 3D object.

• Camera & operator= (const Camera &other)

Construct a new Camera object by another one.

∼Camera ()

Destructor a Camera object.

• Raytracer::Ray ray (double u, double v)

return a ray, going from the camera to the coordinates u and v of the image

Math::Point3D getOrigin (void) const

Get origin of Camera.

• Raytracer::Rectangle3D getScreen (void) const

Get Screen of Camera.

double getFov (void) const

Get Fov of Camera.

· Math::Vector3D getRotation (void) const

Get Rotation of Camera.

- std::pair < double, double > getResolution (void) const

Get Resolution of Camera.

• void setOrigin (Math::Point3D origin)

Set the Origin object.

• void setScreen (Raytracer::Rectangle3D screen)

Set the Screen object.

void setFov (double fov)

Set the Fov object.

void setRotation (Math::Vector3D rotation)

Set the Rotation object.

• void setResolution (double width, double height)

Set the Resolution object.

3.2.1 Constructor & Destructor Documentation

3.2.1.1 Camera() [1/2]

Construct a new Camera object.

Parameters

other	other Camera object to copy
-------	-----------------------------

3.2.1.2 Camera() [2/2]

Construct a new Rectangle 3D object.

Parameters

origin	camera's origin point
screen	of camera

3.2.2 Member Function Documentation

3.2.2.1 operator=()

Construct a new Camera object by another one.

Parameters

```
other | Camera object to duplicate
```

Returns

Camera The new Camera object

3.2.2.2 ray()

return a ray, going from the camera to the coordinates u and v of the image

Parameters

и	location u in rectangle
V	location v in rectangle

3.2.2.3 setFov()

Set the Fov object.

Parameters

```
fov Fov to set
```

3.2.2.4 setOrigin()

Set the Origin object.

Parameters

origin	Origin to set
--------	---------------

3.2.2.5 setResolution()

Set the Resolution object.

Parameters

width	of image
height	of image

3.2.2.6 setRotation()

Set the Rotation object.

Parameters

rotation	Rotation Vector to set
i illalillii	notation vector to set

3.2.2.7 setScreen()

Set the Screen object.

Parameters

The documentation for this class was generated from the following files:

- · include/Camera/Camera.hpp
- src/Core/Camera/Camera.cpp

3.3 Raytracer::CameraBuilder Class Reference

Public Member Functions

• CameraBuilder ()=default

Construct a new CameraBuilder object.

CameraBuilder ()=default

Destructor a CameraBuilder object.

· CameraBuilder & setOrigin (Math::Point3D origin)

Set the Origin object.

CameraBuilder & setScreen (Raytracer::Rectangle3D screen)

Set the Screen object.

• CameraBuilder & setFov (double fov)

Set the Fov object.

CameraBuilder & setRotation (Math::Vector3D rotation)

Set the Rotation object.

· CameraBuilder & setResolution (double width, double height)

Set the Resolution object.

Camera build (void)

Build the Camera object.

3.3.1 Member Function Documentation

3.3.1.1 build()

Build the Camera object.

Returns

Camera to build

3.3.1.2 setFov()

Set the Fov object.

Parameters

fov Fov to set

Returns

CameraBuilder& object to chain the setter

3.3.1.3 setOrigin()

Set the Origin object.

Parameters

```
origin Origin to set
```

Returns

CameraBuilder& object to chain the setter

3.3.1.4 setResolution()

Set the Resolution object.

Parameters

width	of image
height	of image

Returns

CameraBuilder& object to chain the setter

3.3.1.5 setRotation()

Set the Rotation object.

Parameters

```
rotation Rotation Vector to set
```

Returns

CameraBuilder& object to chain the setter

3.3.1.6 setScreen()

Set the Screen object.

Parameters

```
screen | Screen to set
```

Returns

CameraBuilder& object to chain the setter

The documentation for this class was generated from the following files:

- · include/Camera/CameraBuilder.hpp
- · src/Core/Camera/CameraBuilder.cpp

3.4 Color Class Reference

Public Member Functions

• Color (double r, double g, double b)

Construct a new Color object.

Color (Math::Point3D color)

Construct a new Color object form a Point3D.

• Color ()=default

Construct a new Color object with default values (black, (0, 0, 0)).

3.4 Color Class Reference

```
    ∼Color ()=default
```

Destroy the Color object.

• void setR (double r)

Set the red value.

• double getR () const

Get the red value.

• void setG (double g)

Set the green value.

• double getG () const

Get the green value.

void setB (double b)

Set the blue value.

• double getB () const

Get the blue value.

• bool isWrongColor () const

Check if the rgb is valid (0 \leq rgb \leq 255).

3.4.1 Constructor & Destructor Documentation

3.4.1.1 Color() [1/2]

```
Color::Color ( \label{eq:color} \mbox{double } r, \\ \mbox{double } g, \\ \mbox{double } b \mbox{)}
```

Construct a new Color object.

Parameters

r	red value
g	green value
b	blue value

3.4.1.2 Color() [2/2]

Construct a new Color object form a Point3D.

Parameters

color

3.4.2 Member Function Documentation

Set the blue value.

```
3.4.2.1 getB()
double Color::getB ( ) const
Get the blue value.
Returns
     double - blue value
3.4.2.2 getG()
double Color::getG ( ) const
Get the green value.
Returns
     double - green value
3.4.2.3 getR()
double Color::getR ( ) const
Get the red value.
Returns
     double - red value
3.4.2.4 isWrongColor()
bool Color::isWrongColor ( ) const
Check if the rgb is valid (0 \leq= rgb \leq= 255).
Returns
     true
     false
3.4.2.5 setB()
void Color::setB (
              double b )
```

Parameters

b blue value

3.4.2.6 setG()

```
void Color::setG ( \label{eq:color} \mbox{double } g \mbox{ )}
```

Set the green value.

Parameters

3.4.2.7 setR()

```
void Color::setR ( double r )
```

Set the red value.

Parameters

r red value

The documentation for this class was generated from the following files:

- include/Color.hpp
- src/Core/Color.cpp

3.5 Primitive::Cone Class Reference

Inheritance diagram for Primitive::Cone:

Collaboration diagram for Primitive::Cone:

Public Member Functions

• Cone ()

Construct a new Cone object.

• Cone (const Math::Point3D &origin, double radius, Axis axis, std::shared_ptr< Material::IMaterial > material)

Construct a new Cone object.

Cone ()=default

Destroy the Cone object.

• Math::Point3D hitPoint (const Raytracer::Ray &ray) const override

return the hit point of the Cone.

· void setOrigin (Math::Point3D origin)

Set the Origin object.

• void setAngle (double angle)

Set the Angle.

void setAxis (Axis axis)

Set the Axis.

void setMaterial (std::shared_ptr< Material::IMaterial > material)

Set the Material.

· void setRotation (Math::Vector3D rotation)

Set the Rotation object.

• Math::Point3D getOrigin () const

Get the Origin object.

• double getAngle () const

Get the Angle object.

· Axis getAxis () const

Get the Axis object.

std::shared_ptr< Material::IMaterial > getMaterial () const

Get the Material object.

- Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const override
 Get the Normal of the object.
- Optimisation::cubeCollider getColliderBox () const override

Get the collider box object.

3.5.1 Constructor & Destructor Documentation

3.5.1.1 Cone()

Construct a new Cone object.

Parameters

origin	center of the Cone
radius	of the Cone
axis	of the Cone
material	Material of Cone

3.5.2 Member Function Documentation

3.5.2.1 getAngle()

```
double Primitive::Cone::getAngle ( ) const
```

Get the Angle object.

Returns

Angle of Cone

3.5.2.2 getAxis()

```
Primitive::Axis Primitive::Cone::getAxis ( ) const
```

Get the Axis object.

Returns

Axis of Cone

3.5.2.3 getColliderBox()

```
Optimisation::cubeCollider Primitive::Cone::getColliderBox ( ) const [override], [virtual] Get the collider box object.
```

Returns

Octree::cubeCollider

Implements Primitive::IPrimitive.

3.5.2.4 getMaterial()

```
std::shared_ptr< Material::IMaterial > Primitive::Cone::getMaterial ( ) const [virtual]
Get the Material object.
```

Returns

Material of Cone

Implements Primitive::IPrimitive.

3.5.2.5 getNormal()

Get the Normal of the object.

Parameters

hitPoint	to have the normal
ray	of the camera

Returns

Math::Vector3D

Implements Primitive::IPrimitive.

3.5.2.6 getOrigin()

Get the Origin object.

Returns

Origin of Cone

3.5.2.7 hitPoint()

return the hit point of the Cone.

Parameters

ray	vector3D

Returns

Point3D

Implements Primitive::IPrimitive.

3.5.2.8 setAngle()

Set the Angle.

Parameters

angle New angle to set

3.5.2.9 setAxis()

Set the Axis.

Parameters

axis New axis to set

3.5.2.10 setMaterial()

Set the Material.

Parameters

material New material to set

3.5.2.11 setOrigin()

Set the Origin object.

Parameters

origin New origin to set

3.5.2.12 setRotation()

Set the Rotation object.

Parameters

```
rotation - Rotation value
```

The documentation for this class was generated from the following files:

- include/Primitives/Cone.hpp
- src/Plugins/Primitives/Cone/Cone.cpp

3.6 Optimisation::Cube Class Reference

Public Member Functions

Cube (double minX, double minY, double minZ, double maxX, double maxY, double maxZ, PrimitivesContainer primitives, int nbRecursions)

Construct a new Cube object.

• Cube (cubeCollider collider, PrimitivesContainer primitives, int nbRecursions)

Construct a new Cube object.

• Cube ()=default

Construct a new Cube object.

∼Cube ()=default

Destroy the Cube object.

void setMinX (double minX)

Set the min X value.

void setMinY (double minY)

Set the min Y value.

void setMinZ (double minZ)

Set the min Z value.

void setMaxX (double maxX)

Set the max X value.

void setMaxY (double maxY)

Set the max Y value.

void setMaxZ (double maxZ)

Set the max Z value.

double getMinX () const

Get the min X value.

• double getMinY () const

Get the min Y value.

• double getMinZ () const

Get the min Z value.

• double getMaxX () const

Get the max X value.

• double getMaxY () const

Get the max Y value.

• double getMaxZ () const

Get the max Z value.

void setCollider (const cubeCollider &collider)

Set the collider of the cube.

• cubeCollider getCollider () const

Get the collider of the cube.

• PrimitivesContainer getPrimitivesContainer (void) const

Get the primitives container object.

• void identifyPrimitives (PrimitivesContainer primitives)

Indentify all primitives in the cube or on a side of the cube.

• PrimitivesContainer getPrimitivesHits (const Raytracer::Ray ray) const

Get the primitives to be calculated with a ray hits object.

3.6.1 Constructor & Destructor Documentation

3.6.1.1 Cube() [1/2]

Construct a new Cube object.

Parameters

minX	minX position
minY	minY position
minZ	minZ position
maxX	maxX position
maxY	maxY position
maxZ	maxZ position
primitives	primitives to check.

3.6.1.2 Cube() [2/2]

```
PrimitivesContainer primitives,
int nbRecursions )
```

Construct a new Cube object.

normal

Parameters

collider	collider of the cube.
primitives	primitives to check.
nbRecursions	number of recursions.

3.6.2 Member Function Documentation

3.6.2.1 getCollider()

```
cubeCollider Cube::getCollider ( ) const
```

Get the collider of the cube.

Returns

Octree::cubeCollider - collider of the cube.

3.6.2.2 getMaxX()

```
double Cube::getMaxX ( ) const
```

Get the max X value.

Returns

double

3.6.2.3 getMaxY()

```
double Cube::getMaxY ( ) const
```

Get the max Y value.

Returns

double

3.6.2.4 getMaxZ()

```
double Cube::getMaxZ ( ) const
Get the max Z value.
Returns
```

3.6.2.5 getMinX()

double

```
double Cube::getMinX ( ) const
```

Get the min X value.

Returns

double

3.6.2.6 getMinY()

```
double Cube::getMinY ( ) const
```

Get the min Y value.

Returns

double

3.6.2.7 getMinZ()

```
double Cube::getMinZ ( ) const
```

Get the min Z value.

Returns

double

3.6.2.8 getPrimitivesContainer()

Get the primitives container object.

Returns

PrimitivesContainer

3.6.2.9 getPrimitivesHits()

Get the primitives to be calculated with a ray hits object.

Parameters

```
ray ray to check.
```

Returns

PrimitivesContainer

3.6.2.10 identifyPrimitives()

Indentify all primitives in the cube or on a side of the cube.

Parameters

```
primitives primitives to check.
```

3.6.2.11 setCollider()

Set the collider of the cube.

Parameters

3.6.2.12 setMaxX()

Set the max X value.

Parameters

maxX

3.6.2.13 setMaxY()

Set the max Y value.

Parameters

maxY

3.6.2.14 setMaxZ()

Set the max Z value.

Parameters

maxZ

3.6.2.15 setMinX()

```
void Cube::setMinX (
```

```
double minX )
```

Set the min X value.

Parameters

minX

3.6.2.16 setMinY()

Set the min Y value.

Parameters

minY

3.6.2.17 setMinZ()

Set the min Z value.

Parameters

minZ

The documentation for this class was generated from the following files:

- include/Optimisation/Cube.hpp
- src/Core/Optimisation/Cube.cpp

3.7 Optimisation::cubeCollider Struct Reference

Public Attributes

- std::pair< bool, double > minX
- std::pair < bool, double > minY
- std::pair< bool, double > minZ
- std::pair< bool, double > maxX

```
    std::pair< bool, double > maxY
```

std::pair< bool, double > maxZ

The documentation for this struct was generated from the following file:

3.8 Primitive::Cylinder Class Reference

Inheritance diagram for Primitive::Cylinder:

Collaboration diagram for Primitive::Cylinder:

Public Member Functions

• Cylinder ()

Construct a new Cylinder object.

• Cylinder (const Math::Point3D &origin, double radius, Primitive::Axis axis)

Construct a new Cylinder object.

∼Cylinder ()=default

Destroy the Cylinder object.

Math::Point3D hitPoint (const Raytracer::Ray &ray) const override

Return the hit point of the cylinder.

void setOrigin (const Math::Point3D &origin)

Set origin of cylinder.

void setAxis (double axis)

Set axis of cylinder.

• void setRadius (double radius)

Set radius of cylinder.

· void setAxis (const Primitive::Axis &axis)

Set the Axis object.

• void setRotation (Math::Vector3D rotation)

Set the Rotation object.

std::shared_ptr< Material::IMaterial > getMaterial () const

Get the Material object.

void setMaterial (std::shared_ptr< Material::IMaterial > material)

Set the Material object.

Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const override

Get the Normal of the object.

• Optimisation::cubeCollider getColliderBox () const override

Get the collider box object.

3.8.1 Constructor & Destructor Documentation

3.8.1.1 Cylinder()

Construct a new Cylinder object.

Parameters

origin	center of the cylinder
radius	of the cylinder
axis	of the cylinder

3.8.2 Member Function Documentation

3.8.2.1 getColliderBox()

```
Optimisation::cubeCollider Primitive::Cylinder::getColliderBox ( ) const [override], [virtual]
```

Get the collider box object.

Returns

Octree::cubeCollider

Implements Primitive::IPrimitive.

3.8.2.2 getMaterial()

```
std::shared_ptr< Material::IMaterial > Primitive::Cylinder::getMaterial ( ) const [virtual]
```

Get the Material object.

Returns

Material of cylinder

Implements Primitive::IPrimitive.

3.8.2.3 getNormal()

Get the Normal of the object.

Parameters

hitPoint	to have the normal
ray	of the camera

Returns

Math::Vector3D

Implements Primitive::IPrimitive.

3.8.2.4 hitPoint()

Return the hit point of the cylinder.

Parameters

Returns

Point3D

Implements Primitive::IPrimitive.

3.8.2.5 setAxis() [1/2]

Set the Axis object.

Parameters

axis The axis of cylinder Object to set

3.8.2.6 setAxis() [2/2]

```
void Primitive::Cylinder::setAxis (
```

```
double axis )
```

Set axis of cylinder.

Parameters

```
axis double
```

3.8.2.7 setMaterial()

Set the Material object.

Parameters

material | Material of cylinder

3.8.2.8 setOrigin()

Set origin of cylinder.

Parameters

hitPoint Point3D

3.8.2.9 setRadius()

Set radius of cylinder.

Parameters

radius double

3.8.2.10 setRotation()

Set the Rotation object.

Parameters

```
rotation - Rotation value
```

The documentation for this class was generated from the following files:

- · include/Primitives/Cylinder.hpp
- src/Plugins/Primitives/Cylinder/Cylinder.cpp

3.9 Light::Directional Class Reference

Inheritance diagram for Light::Directional:

Collaboration diagram for Light::Directional:

Public Member Functions

· Directional ()

Construct a new Directional object.

• Directional (Math::Point3D position, Math::Vector3D direction, double diffuseMultiplier)

Construct a new Directional object.

∼Directional ()=default

Destroy the Directional object.

· Math::Point3D getPosition (void) const

Get the Position number of Point light.

void setPosition (Math::Point3D position)

Set the Position object.

Math::Vector3D getDirection (void) const

Get the Direction number of Point light.

void setDirection (Math::Vector3D direction)

Set the Direction object.

void setColor (const Color &rgb)

Set the Color object.

• double getDiffuseMultiplier (void) const

Get the Diffuse Multiplier number of Point light.

void setDiffuseMultiplier (double diffuseMultiplier)

Set the Diffuse Multiplier object.

Light::LightType getType (void) const override

Get type of Light.

Color getColor (void) const override

Get the Color object.

 Color computeColor (Math::Vector3D primitiveNormal, const Math::Point3D &hitPoint, Math::Point3D color, const Primitives::Shadow &shadow) const override

compute the color point with directional light

3.9.1 Constructor & Destructor Documentation

3.9.1.1 Directional()

Construct a new Directional object.

Parameters

position	Position of Directionnal Light
direction	Direction of Directionnal Light
diffuseMultiplier	Diffuse Multiplier of Directionnal Light

3.9.2 Member Function Documentation

3.9.2.1 computeColor()

compute the color point with directional light

Parameters

primitiveNormal	normal to the hitpoint
hitPoint	hitpoint
color	color
shadow	Primitive::Shadow class to handle shadows

Returns

Math::Point3D color

Implements Light::ILight.

3.9.2.2 getColor()

Get the Color object.

Returns

Color

Implements Light::ILight.

3.9.2.3 getDiffuseMultiplier()

Get the Diffuse Multiplier number of Point light.

Returns

double

3.9.2.4 getDirection()

Get the Direction number of Point light.

Returns

Math::Vector3D direction

3.9.2.5 getPosition()

Get the Position number of Point light.

Returns

Math::Point3D position

3.9.2.6 getType()

Get type of Light.

Returns

The type of the light

Implements Light::ILight.

3.9.2.7 setColor()

Set the Color object.

Parameters

rgb color

3.9.2.8 setDiffuseMultiplier()

Set the Diffuse Multiplier object.

Parameters

```
diffuseMultiplier | New Diffuse Multiplier of Directional Light
```

3.9.2.9 setDirection()

Set the Direction object.

Parameters

direction New Direction of Directional Light

3.9.2.10 setPosition()

Set the Position object.

Parameters

position New position of Directional Light

The documentation for this class was generated from the following files:

- · include/Lights/Directional.hpp
- src/Plugins/Lights/Directional/Directional.cpp

3.10 Raytracer::DLLoader Class Reference

Public Member Functions

DLLoader (const std::string libraryPath)

Construct a new DLLoader object.

∼DLLoader ()

Destroy the DLLoader object.

• template<typename T >

T getInstance (const std::string functionName) const

Get the Instance object.

Protected Attributes

- std::string _libraryPath
- void * _libraryInstance

3.10.1 Constructor & Destructor Documentation

3.10.1.1 DLLoader()

Construct a new DLLoader object.

Parameters

libraryPath

3.10.2 Member Function Documentation

3.10.2.1 getInstance()

Get the Instance object.

Parameters

functionName

Returns

Т

The documentation for this class was generated from the following files:

- include/Parser/DLLoader.hpp
- · src/Core/Parser/DLLoader.cpp

3.11 Raytracer::Factory Class Reference

Public Types

- using **PrimitivesCreator** = std::function< std::shared_ptr< Primitive::IPrimitive >()>
- using LightsCreator = std::function< std::shared_ptr< Light::ILight >()>

Public Member Functions

• Factory ()

Construct a new Scene object.

∼Factory ()=default

Destruct a Scene object.

- std::shared_ptr< Primitive::IPrimitive > createPrimitivesComponent (const std::string &type)
- void registerPrimitivesComponent (const std::string &type, PrimitivesCreator creator)
- std::shared_ptr< Light::ILight > createLightsComponent (const std::string &type)
- void registerLightsComponent (const std::string &type, LightsCreator creator)

The documentation for this class was generated from the following files:

- · include/Parser/Factory.hpp
- src/Core/Parser/Factory.cpp

3.12 FlatColor Class Reference

Inheritance diagram for FlatColor:

3.13 Light::ILight Class Reference

Inheritance diagram for Light::ILight:

Public Member Functions

• virtual \sim ILight ()=default

Destroy the ILight object.

virtual Light::LightType getType (void) const =0
 Get type of Light.

• virtual Color getColor (void) const =0

Get the Color object.

• virtual Color computeColor (Math::Vector3D primitiveNormal, const Math::Point3D &hitPoint, Math::Point3D color, const Primitives::Shadow &shadow) const =0

Compute the color point with lights.

3.13.1 Member Function Documentation

3.13.1.1 computeColor()

Compute the color point with lights.

Parameters

primitiveNormal	normal to the hitpoint
hitPoint	hitpoint
color	color
shadow	Primitive::Shadow class to handle shadows

Returns

Color color

Implemented in Light::Point, Light::Directional, and Light::Ambient.

3.13.1.2 getColor()

Get the Color object.

Returns

Color

Implemented in Light::Point, Light::Directional, and Light::Ambient.

3.13.1.3 getType()

Get type of Light.

Returns

The type of the light

Implemented in Light::Point, Light::Directional, and Light::Ambient.

The documentation for this class was generated from the following file:

• include/Lights/ILight.hpp

3.14 Material:: IMaterial Class Reference

Inheritance diagram for Material:: IMaterial:

Public Member Functions

- virtual ~IMaterial ()=default
 Destroy the IMaterial object.
- virtual MaterialType getType (void) const =0
 Get type of Material.

3.14.1 Member Function Documentation

3.14.1.1 getType()

Get type of Material.

Returns

The type of the material

Implemented in FlatColor.

The documentation for this class was generated from the following file:

· include/Materials/IMaterial.hpp

3.15 Primitive::IPrimitive Class Reference

Inheritance diagram for Primitive::IPrimitive:

Public Member Functions

- virtual ∼IPrimitive ()=default
 - Destroy the IPrimitive object.
- virtual Math::Point3D hitPoint (const Raytracer::Ray &ray) const =0
 - compute the hit point of a primitive with a ray
- virtual Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const =0
 Get the Normal of the object.
- virtual std::shared_ptr< Material::IMaterial > getMaterial () const =0
 Get the Material object.
- virtual Optimisation::cubeCollider getColliderBox () const =0

Get the collider box object.

3.15.1 Member Function Documentation

3.15.1.1 getColliderBox()

```
virtual Optimisation::cubeCollider Primitive::IPrimitive::getColliderBox ( ) const [pure
virtual]
```

Get the collider box object.

Returns

Octree::cubeCollider

Implemented in Primitive::Triangle, Primitive::Sphere, Primitive::RectangularCuboid, Primitive::Plane, Primitive::Cylinder, and Primitive::Cone.

3.15.1.2 getMaterial()

```
virtual std::shared_ptr<Material::IMaterial> Primitive::IPrimitive::getMaterial ( ) const
[pure virtual]
```

Get the Material object.

Returns

```
std::shared_ptr<Material::IMaterial>
```

Implemented in Primitive::Triangle, Primitive::Sphere, Primitive::Plane, Primitive::RectangularCuboid, Primitive::Cylinder, and Primitive::Cone.

3.15.1.3 getNormal()

Get the Normal of the object.

Parameters

hitPoint	to compute the normal
ray	of the camera

Returns

Math::Vector3D

Implemented in Primitive::Triangle, Primitive::Sphere, Primitive::RectangularCuboid, Primitive::Plane, Primitive::Cylinder, and Primitive::Cone.

3.15.1.4 hitPoint()

compute the hit point of a primitive with a ray

Parameters

ray Ve

Returns

Math::Point3D

Implemented in Primitive::Triangle, Primitive::Sphere, Primitive::RectangularCuboid, Primitive::Plane, Primitive::Cylinder, and Primitive::Cone.

The documentation for this class was generated from the following file:

• include/Primitives/IPrimitive.hpp

3.16 Light::LightsContainer Class Reference

Public Member Functions

• LightsContainer ()=default

Construct a new Lights Container object.

∼LightsContainer ()=default

Destroy the Lights Container object.

void add (std::shared_ptr< Light::ILight > Light)

Add a Light to the container.

void clear ()

Clear the container.

std::vector< std::shared_ptr< Light::ILight >> getLightsList (void) const

Get the Lights List object.

Color computeColor (Math::Vector3D primitiveNormal, const Math::Point3D &hitPoint, Math::Point3D color, const Primitives::Shadow &shadow) const

Compute the color point with lights.

3.16.1 Member Function Documentation

3.16.1.1 add()

Add a Light to the container.

Parameters

Light to add

3.16.1.2 computeColor()

Compute the color point with lights.

Parameters

primitiveNormal	normal to the hitpoint
hitPoint	hitpoint
color	color
shadow	Primitive::Shadow class to handle shadows

Returns

Math::Point3D color

Color color

3.16.1.3 getLightsList()

Get the Lights List object.

Returns

```
std::vector<std::shared_ptr<Light::ILight>>
```

The documentation for this class was generated from the following files:

- · include/Lights/LightsContainer.hpp
- · src/Core/Lights/LightsContainer.cpp

3.17 Optimisation::Octree Class Reference

Public Member Functions

• Octree (PrimitivesContainer primitives, cubeCollider cubeCollider)

Construct a new Octree object with a list of primitives.

• Octree ()=default

Construct a new Octree object.

• ∼Octree ()=default

Destroy the Octree object.

• PrimitivesContainer getPrimitivesHits (const Raytracer::Ray &ray) const

Get the primitives to be calculated with a ray hits object.

3.17.1 Constructor & Destructor Documentation

3.17.1.1 Octree()

Construct a new Octree object with a list of primitives.

Parameters

primitives	primitives to study.
cubeCollider	collider of the cube.

3.17.2 Member Function Documentation

3.17.2.1 getPrimitivesHits()

Get the primitives to be calculated with a ray hits object.

Parameters

```
ray ray to check.
```

Returns

PrimitivesContainer

The documentation for this class was generated from the following files:

- include/Optimisation/Octree.hpp
- src/Core/Optimisation/Octree.cpp

3.18 Raytracer::Scene::ParserException Class Reference

Inheritance diagram for Raytracer::Scene::ParserException:

Collaboration diagram for Raytracer::Scene::ParserException:

Public Member Functions

- ParserException (const std::string &msg)
- virtual const char * what () const noexcept override

The documentation for this class was generated from the following file:

· include/Parser/Scene.hpp

3.19 Primitive::Plane Class Reference

Inheritance diagram for Primitive::Plane:

Collaboration diagram for Primitive::Plane:

Public Member Functions

• Plane ()

Construct a new Plane object.

• Plane (Primitive::Axis axis, double position, std::shared_ptr< Material::IMaterial > material)

Construct a new Plane object.

• ∼Plane ()=default

Destroy the Plane object.

• Math::Point3D hitPoint (const Raytracer::Ray &ray) const override

Return the hit point of the plane.

Primitive::Axis getAxis (void) const

Get the Axis object.

• void setAxis (const Primitive::Axis &axis)

Set the Axis object.

• void setRotation (Math::Vector3D rotation)

Set the Rotation object.

· Math::Point3D getPosition (void) const

Get the Position object plane.

• void setPosition (Math::Point3D position)

Set the Position object.

• std::shared_ptr< Material::IMaterial > getMaterial () const override

Get the Material object.

void setMaterial (std::shared_ptr< Material::IMaterial > material)

Set the Material.

Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const override
 Get the normal of the object.

Optimisation::cubeCollider getColliderBox () const override

Get the collider box object.

3.19.1 Constructor & Destructor Documentation

3.19.1.1 Plane()

Construct a new Plane object.

Parameters

axis	Axis of the plane
position	offset on axis

3.19.2 Member Function Documentation

3.19.2.1 getAxis()

Get the Axis object.

Returns

Axis The axis of Plane Object

3.19.2.2 getColliderBox()

```
Optimisation::cubeCollider Primitive::Plane::getColliderBox ( ) const [override], [virtual]
```

Get the collider box object.

Returns

Octree::cubeCollider

Implements Primitive::IPrimitive.

3.19.2.3 getMaterial()

```
std::shared_ptr< Material::IMaterial > Primitive::Plane::getMaterial ( ) const [override],
[virtual]
```

Get the Material object.

Returns

Material of plane

Implements Primitive::IPrimitive.

3.19.2.4 getNormal()

Get the normal of the object.

Parameters

hitPoint	to have the normal	
ray	of the camera	

Returns

Math::Vector3D

Implements Primitive::IPrimitive.

3.19.2.5 getPosition()

Get the Position object plane.

Returns

Math::Point3D Position of Plane Object

3.19.2.6 hitPoint()

Return the hit point of the plane.

Parameters

ray ray to check vector3D	ray
---------------------------	-----

Returns

Point3D

Implements Primitive::IPrimitive.

3.19.2.7 setAxis()

Set the Axis object.

Parameters

axis The axis of Plane Object to set

3.19.2.8 setMaterial()

Set the Material.

Parameters

material New material to set

3.19.2.9 setPosition()

Set the Position object.

Parameters

position | Position to set

3.19.2.10 setRotation()

Set the Rotation object.

Parameters

rotation - Rotation value

The documentation for this class was generated from the following files:

- include/Primitives/Plane.hpp
- src/Plugins/Primitives/Plane/Plane.cpp

3.20 Light::Point Class Reference

Inheritance diagram for Light::Point:

Collaboration diagram for Light::Point:

Public Member Functions

• Point ()

Construct a new Point object.

· Point (Math::Point3D position, double diffuseMultiplier)

Construct a new Point object.

∼Point ()=default

Destroy the Point object.

• Math::Point3D getPosition (void) const

Get the Position number of Point light.

void setPosition (Math::Point3D position)

Set the Position object.

void setColor (const Color &rgb)

Set the Color object.

· double getDiffuseMultiplier (void) const

Get the Diffuse Multiplier number of Point light.

• void setDiffuseMultiplier (double diffuseMultiplier)

Set the Diffuse Multiplier object.

• Light::LightType getType (void) const override

Get type of Light.

• Color getColor (void) const override

Get the Color object.

 Color computeColor (Math::Vector3D primitiveNormal, const Math::Point3D &hitPoint, Math::Point3D color, const Primitives::Shadow &shadow) const override

Compute the color point with ponctual light.

3.20.1 Constructor & Destructor Documentation

3.20.1.1 Point()

Construct a new Point object.

Parameters

position	Position of Point Light
diffuseMultiplier	Diffuse multiplier of Point Light

3.20.2 Member Function Documentation

3.20.2.1 computeColor()

Compute the color point with ponctual light.

Parameters

primitiveNormal	normal to the hitpoint
hitPoint	hitpoint
color	color
shadow	Primitive::Shadow class to handle shadows

Returns

Math::Point3D color

Implements Light::ILight.

3.20.2.2 getColor()

Get the Color object.

Returns

Color

Implements Light::ILight.

3.20.2.3 getDiffuseMultiplier()

Get the Diffuse Multiplier number of Point light.

Returns

double

3.20.2.4 getPosition()

Get the Position number of Point light.

Returns

Math::Point3D position

3.20.2.5 getType()

Get type of Light.

Returns

The type of the light

Implements Light::ILight.

3.20.2.6 setColor()

Set the Color object.

Parameters

rgb color

3.20.2.7 setDiffuseMultiplier()

Set the Diffuse Multiplier object.

Parameters

diffuseMultiplier | New Diffuse Multiplier of Point Light

3.20.2.8 setPosition()

Set the Position object.

Parameters

position New position of Point Light

The documentation for this class was generated from the following files:

- · include/Lights/Point.hpp
- src/Plugins/Lights/Point/Point.cpp

3.21 Primitive::PrimitivesContainer Class Reference

Public Member Functions

· PrimitivesContainer ()=default

Construct a new Primitives Container object.

 $\bullet \quad \sim \! \text{PrimitivesContainer ()=} \\ \text{default}$

Destroy the Primitives Container object.

void add (std::shared_ptr< Primitive::IPrimitive > primitive)

Add a Primitive to the container.

• void clear ()

Clear the container.

Color getColorPoint (const Raytracer::Ray &ray, const Light::LightsContainer &lights) const

Return the color of hit point of a ray in all the primitives.

• std::vector< std::shared_ptr< Primitive::IPrimitive >> getPrimitivesList (void) const

Get the Primitives List object.

• Color computeColor (const std::shared_ptr< Primitive::IPrimitive > &primitive, const Math::Point3D &hitPoint, const Light::LightsContainer &lights, const Raytracer::Ray &ray) const

Compute the color pixel of a primitive's hitpoint.

3.21.1 Member Function Documentation

3.21.1.1 add()

Add a Primitive to the container.

Parameters

```
primitive to add
```

3.21.1.2 computeColor()

Compute the color pixel of a primitive's hitpoint.

Parameters

primitive	primitive to compute
hitPoint	to check
lights	list of lights
ray	ray of the camera

Returns

Math::Point3D

3.21.1.3 getColorPoint()

Return the color of hit point of a ray in all the primitives.

Parameters

ray	Math::Vector3D
lights	list of lights

Returns

Color

3.21.1.4 getPrimitivesList()

Get the Primitives List object.

Returns

```
std::vector<std::shared_ptr<Primitive::IPrimitive>>
```

The documentation for this class was generated from the following files:

- include/Primitives/PrimitivesContainer.hpp
- · src/Core/Primitives/PrimitivesContainer.cpp

3.22 Raytracer::Ray Class Reference

Ray class, (point and direction vectors)

```
#include <Ray.hpp>
```

Public Member Functions

• Ray ()=default

Construct a new Ray object.

Ray (const Math::Point3D &origin, const Math::Vector3D &direction)

Construct a new Ray object.

∼Ray ()=default

Destroy the Ray object.

· const Math::Point3D & origin () const

return the origin of the ray

· const Math::Vector3D & direction () const

return the direction of the ray

· Math::Point3D at (double t) const

return the point vector of where point the ray at multiply by t

3.22.1 Detailed Description

Ray class, (point and direction vectors)

3.22.2 Constructor & Destructor Documentation

3.22.2.1 Ray()

Construct a new Ray object.

Parameters

origin	point vector
direction	vector direction

3.22.3 Member Function Documentation

3.22.3.1 at()

return the point vector of where point the ray at multiply by t

Parameters

t multiplication factor

Returns

Math::Point3D

3.22.3.2 direction()

```
const Math::Vector3D & Raytracer::Ray::direction ( ) const
return the direction of the ray
```

Returns

const Math::Vector3D&

3.22.3.3 origin()

```
const Math::Point3D & Raytracer::Ray::origin ( ) const
return the origin of the ray
```

Returns

const Math::Point3D&

The documentation for this class was generated from the following files:

- include/Ray.hpp
- src/Core/Ray.cpp

3.23 Raytracer::Rectangle3D Class Reference

Public Member Functions

· Rectangle3D ()

Construct a new Rectangle 3D object.

Rectangle3D (Math::Point3D origin, Math::Vector3D bottom_side, Math::Vector3D left_side)

Construct a new Rectangle 3D object.

∼Rectangle3D ()

Destructor a Rectangle 3D object.

• Math::Point3D pointAt (double u, double v)

returns the 3D coordinates of the point at the given location in our rectangle

Math::Point3D getOrigin (void)

Get origin of Rectangle 3D.

· Math::Vector3D getBottomSide (void)

Get bottom side of Rectangle 3D.

Math::Vector3D getLeftSide (void)

Get left side of Rectangle 3D.

3.23.1 Constructor & Destructor Documentation

3.23.1.1 Rectangle3D()

Construct a new Rectangle 3D object.

Parameters

origin	bottom-left corner of the rectangle
bottom_side	vector from the bottom-left corner of the rectangle
left_side	vector from the bottom-left corner of the rectangle

3.23.2 Member Function Documentation

3.23.2.1 pointAt()

returns the 3D coordinates of the point at the given location in our rectangle

Parameters

и	location u in rectangle
V	location v in rectangle

The documentation for this class was generated from the following files:

- include/Camera/Rectangle.hpp
- src/Core/Camera/Rectangle.cpp

3.24 Primitive::RectangularCuboid Class Reference

Inheritance diagram for Primitive::RectangularCuboid:

Collaboration diagram for Primitive::RectangularCuboid:

Public Member Functions

RectangularCuboid ()

Construct a new RectangularCuboid object.

 RectangularCuboid (double maxX, double maxY, double maxZ, double minX, double minY, double minZ, std::shared ptr< Material::IMaterial > material)

Construct a new RectangularCuboid object.

∼RectangularCuboid ()=default

Destroy the RectangularCuboid object.

Math::Point3D hitPoint (const Raytracer::Ray &ray) const override

Return the hit point of the rectangular cuboid.

• double getMinX () const

Get the min x value.

double getMinY () const

Get the min y value.

• double getMinZ () const

Get the min z value.

double getMaxX () const

Get the max x value.

• double getMaxY () const

Get the max y value.

double getMaxZ () const

Get the max z value.

void setMinX (double minX)

Set the min x value.

void setMinY (double minY)

Set the min y value.

void setMinZ (double minZ)

Set the min z value.

void setMaxX (double maxX)

Set the max x value.

void setMaxY (double maxY)

Set the max y value.

void setMaxZ (double maxZ)

Set the max z value.

• std::shared_ptr< Material::IMaterial > getMaterial () const

Get the Material object.

void setMaterial (std::shared_ptr< Material::IMaterial > material)

Set the Material object.

• Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const override

Get the Normal of the object.

void setRotation (Math::Vector3D rotation)

Set the Rotation of the object.

• Optimisation::cubeCollider getColliderBox () const override

Get the collider box object.

3.24.1 Constructor & Destructor Documentation

3.24.1.1 RectangularCuboid()

Construct a new RectangularCuboid object.

Parameters

maxX	double max x of the rectangular cuboid
maxY	double max y of the rectangular cuboid
maxZ	double max z of the rectangular cuboid
minX	double min x of the rectangular cuboid
minY	double min y of the rectangular cuboid
minZ	double min z of the rectangular cuboid
material	Material of the rectangular cuboid

3.24.2 Member Function Documentation

3.24.2.1 getColliderBox()

Optimisation::cubeCollider Primitive::RectangularCuboid::getColliderBox () const [override],
[virtual]

Get the collider box object.

Returns

Octree::cubeCollider

Implements Primitive::IPrimitive.

3.24.2.2 getMaterial()

std::shared_ptr< Material::IMaterial > Primitive::RectangularCuboid::getMaterial () const
[virtual]

Get the Material object.

Returns

Material of rectangular cuboid

Implements Primitive::IPrimitive.

3.24.2.3 getMaxX()

double Primitive::RectangularCuboid::getMaxX () const

Get the max x value.

Returns

double | max x value.

3.24.2.4 getMaxY()

 $\verb|double Primitive::RectangularCuboid::getMaxY () const|\\$

Get the max y value.

Returns

double | max y value.

3.24.2.5 getMaxZ()

```
double Primitive::RectangularCuboid::getMaxZ ( ) const
```

Get the max z value.

Returns

double | max z value.

3.24.2.6 getMinX()

```
\verb|double Primitive::RectangularCuboid::getMinX ( ) const|\\
```

Get the min x value.

Returns

double | min x value.

3.24.2.7 getMinY()

```
double Primitive::RectangularCuboid::getMinY ( ) const
```

Get the min y value.

Returns

double | min y value.

3.24.2.8 getMinZ()

```
double Primitive::RectangularCuboid::getMinZ ( ) const
```

Get the min z value.

Returns

double | min z value.

3.24.2.9 getNormal()

Get the Normal of the object.

Parameters

hitPoint	to have the normal
ray	of the camera

Returns

Math::Vector3D

Implements Primitive::IPrimitive.

3.24.2.10 hitPoint()

Return the hit point of the rectangular cuboid.

Parameters

Returns

Point3D

Implements Primitive::IPrimitive.

3.24.2.11 setMaterial()

Set the Material object.

Parameters

material	Material of rectangular cuboid
----------	--------------------------------

3.24.2.12 setMaxX()

void Primitive::RectangularCuboid::setMaxX (

double maxX)

Set the max x value.

Parameters

maxX double max x value.

3.24.2.13 setMaxY()

Set the max y value.

Parameters

maxY double max y value	
-------------------------	--

3.24.2.14 setMaxZ()

```
void Primitive::RectangularCuboid::setMaxZ ( \mbox{double } \max \mbox{$Z$ )} \label{eq:maxZ}
```

Set the max z value.

Parameters

maxZ | double max z value.

3.24.2.15 setMinX()

```
void Primitive::RectangularCuboid::setMinX ( double minX )
```

Set the min x value.

Parameters

minX double min x value.

3.24.2.16 setMinY()

Set the min y value.

Parameters

minY double min y value.

3.24.2.17 setMinZ()

Set the min z value.

Parameters

minZ double min z value.

3.24.2.18 setRotation()

Set the Rotation of the object.

Parameters

rotation - Rotation value

The documentation for this class was generated from the following files:

- include/Primitives/RectangularCuboid.hpp
- src/Plugins/Primitives/RectangularCuboid/RectangularCuboid.cpp

3.25 Raytracer::Renderer Class Reference

Public Member Functions

• Renderer (Raytracer::Scene scene)

Construct a new Renderer object.

∼Renderer ()=default

Destroy the Renderer object.

· void renderScene ()

Render the scene in a window with SDL2.

• void renderFinalScene ()

Render the final scene in a .ppm file.

• void writeColor (std::ostream &o, const Color &color)

Write a rgb color in a stream.

3.25.1 Constructor & Destructor Documentation

3.25.1.1 Renderer()

Construct a new Renderer object.

Parameters

```
scene to render
```

3.25.2 Member Function Documentation

3.25.2.1 writeColor()

Write a rgb color in a stream.

Parameters

0	stream to write in
color	color to write

The documentation for this class was generated from the following files:

- · include/Renderer.hpp
- src/Core/Renderer.cpp

3.26 Raytracer::Scene Class Reference

Classes

· class ParserException

Public Types

• using **PrimitivesCreator** = std::function< std::unique_ptr< Primitive::IPrimitive >()>

Public Member Functions

• Scene (std::string filePath)

Construct a new Scene object.

• ∼Scene ()=default

Destruct a Scene object.

Raytracer::Camera & getCamera (void)

Get the Camera object.

• Primitive::PrimitivesContainer getPrimitives (void) const

Get the Primitives object.

• Light::LightsContainer getLights (void) const

Get the Lights object.

3.26.1 Constructor & Destructor Documentation

3.26.1.1 Scene()

Construct a new Scene object.

Parameters

```
filePath File to parse
```

3.26.2 Member Function Documentation

3.26.2.1 getCamera()

Get the Camera object.

Returns

Camera Object

3.26.2.2 getLights()

Get the Lights object.

Returns

Light::LightsContainer

3.26.2.3 getPrimitives()

Get the Primitives object.

Returns

Primitive::PrimitivesContainer

The documentation for this class was generated from the following files:

- include/Parser/Scene.hpp
- · src/Core/Parser/Scene.cpp

3.27 Primitives::Shadow Class Reference

Public Member Functions

- Shadow (const std::vector< std::shared_ptr< Primitive::IPrimitive >> &primitives)
 Construct a new Shadow object.
- ∼Shadow ()=default

Destroy the Shadow object.

• bool isShadow (const Math::Vector3D &vectorLightToPoint, const Math::Point3D &hitPoint) const Return if there is a shadow.

3.27.1 Constructor & Destructor Documentation

3.27.1.1 Shadow()

Construct a new Shadow object.

Parameters

primitives

3.27.2 Member Function Documentation

3.27.2.1 isShadow()

Return if there is a shadow.

Returns

true

false

The documentation for this class was generated from the following files:

- include/Primitives/Shadow.hpp
- src/Core/Primitives/Shadow.cpp

3.28 Primitive::Sphere Class Reference

Inheritance diagram for Primitive::Sphere:

Collaboration diagram for Primitive::Sphere:

Public Member Functions

• Sphere ()

Construct a new Sphere object.

• Sphere (const Math::Point3D &origin, double radius, std::shared_ptr< Material::IMaterial > material)

Construct a new Sphere object.

∼Sphere ()=default

Destroy the Sphere object.

• Math::Point3D hitPoint (const Raytracer::Ray &ray) const override

Return the hit point of the sphere.

• void setOrigin (Math::Point3D origin)

Set the Origin object.

• void setRadius (double radius)

Set the Radius.

void setMaterial (std::shared_ptr< Material::IMaterial > material)

Set the Material.

void setRotation (Math::Vector3D rotation)

Set the Rotation object.

Math::Point3D getOrigin () const

Get the Origin object.

· double getRadius () const

Get the Origin object.

• std::shared_ptr< Material::IMaterial > getMaterial () const override

Get the Material object.

- Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const override
 Get the Normal of the object.
- Optimisation::cubeCollider getColliderBox () const override

Get the collider box object.

3.28.1 Constructor & Destructor Documentation

3.28.1.1 Sphere()

Construct a new Sphere object.

Parameters

origin	center of the sphere
radius	of the sphere
material	Material of Sphere

3.28.2 Member Function Documentation

3.28.2.1 getColliderBox()

```
Optimisation::cubeCollider Primitive::Sphere::getColliderBox ( ) const [override], [virtual]
```

Get the collider box object.

Returns

Octree::cubeCollider

Implements Primitive::IPrimitive.

3.28.2.2 getMaterial()

```
std::shared_ptr< Material::IMaterial > Primitive::Sphere::getMaterial ( ) const [override],
[virtual]
```

Get the Material object.

Returns

Material of sphere

Implements Primitive::IPrimitive.

3.28.2.3 getNormal()

Get the Normal of the object.

Parameters

hitPoint	to compute the normal
ray	of the camera

Returns

Math::Vector3D

Implements Primitive::IPrimitive.

3.28.2.4 getOrigin()

Get the Origin object.

Returns

Origin of sphere

3.28.2.5 getRadius()

```
double Primitive::Sphere::getRadius ( ) const
```

Get the Origin object.

Returns

Radius of sphere

3.28.2.6 hitPoint()

Return the hit point of the sphere.

Parameters

ray vector3D

Returns

Point3D

Implements Primitive::IPrimitive.

3.28.2.7 setMaterial()

Set the Material.

Parameters

material | New material to set

3.28.2.8 setOrigin()

Set the Origin object.

Parameters

origin New origin to set

3.28.2.9 setRadius()

Set the Radius.

Parameters

radius New radius to set

3.28.2.10 setRotation()

Set the Rotation object.

Parameters

rotation - Rotation value

The documentation for this class was generated from the following files:

- include/Primitives/Sphere.hpp
- src/Plugins/Primitives/Sphere/Sphere.cpp

3.29 Primitive::Triangle Class Reference

Inheritance diagram for Primitive::Triangle:

Collaboration diagram for Primitive::Triangle:

Public Member Functions

• Triangle ()

Construct a new triangle object.

• Triangle (const Math::Point3D &vertex1, const Math::Point3D &vertex2, const Math::Point3D &vertex3, std

::shared ptr < Material::IMaterial > material)

Construct a new triangle object.

∼Triangle ()=default

Destroy the triangle object.

Math::Point3D hitPoint (const Raytracer::Ray &ray) const override

Return the hit point of the triangle.

void setVertex1 (const Math::Point3D &vertex1)

Set the vertex1 object.

void setVertex2 (const Math::Point3D &vertex2)

Set the vertex2 object.

void setVertex3 (const Math::Point3D &vertex3)

Set the vertex3 object.

void setMaterial (std::shared ptr< Material::IMaterial > material)

Set the material.

void setRotation (Math::Vector3D rotation)

Set the rotation object.

• Math::Point3D getVertex1 () const

Get the vertex1 object.

• Math::Point3D getVertex2 () const

Get the vertex2 object.

• Math::Point3D getVertex3 () const

Get the vertex3 object.

• std::shared ptr< Material::IMaterial > getMaterial () const override

Get the material object.

• Math::Vector3D getNormal (const Math::Vector3D &hitPoint, const Raytracer::Ray &ray) const override

Get the normal of the object.

• void createNormals ()

Create the two different normals of the triangle.

Math::Vector3D getTriangleNormal () const

Get the triangle normal object.

Math::Vector3D getTriangleInverseNormal () const

Get the triangle inverse normal object.

void setTriangleNormal (const Math::Vector3D &normal)

Set the triangle normal object.

void setTriangleInverseNormal (const Math::Vector3D &inverseNormal)

Set the triangle inverse normal object.

· Optimisation::cubeCollider getColliderBox () const override

Get the collider box object.

3.29.1 Constructor & Destructor Documentation

3.29.1.1 Triangle()

Construct a new triangle object.

Parameters

vertex1	first edge of the triangle	
vertex2	second edge of the triangle	
vertex3	third edge of the triangle	
material	of the triangle	

3.29.2 Member Function Documentation

3.29.2.1 getColliderBox()

```
Optimisation::cubeCollider Primitive::Triangle::getColliderBox ( ) const [override], [virtual]
```

Get the collider box object.

Returns

Octree::cubeCollider

Implements Primitive::IPrimitive.

3.29.2.2 getMaterial()

```
std::shared_ptr< Material::IMaterial > Primitive::Triangle::getMaterial ( ) const [override],
[virtual]
```

Get the material object.

Returns

Material of triangle

Implements Primitive::IPrimitive.

3.29.2.3 getNormal()

Get the normal of the object.

Parameters

hitPoint	to compute the normal
ray	of the camera

Returns

Math::Vector3D

Implements Primitive::IPrimitive.

3.29.2.4 getTriangleInverseNormal()

Math::Vector3D Primitive::Triangle::getTriangleInverseNormal () const

Get the triangle inverse normal object.

Returns

Math::Vector3D

3.29.2.5 getTriangleNormal()

Math::Vector3D Primitive::Triangle::getTriangleNormal () const

Get the triangle normal object.

Returns

Math::Vector3D

3.29.2.6 getVertex1()

Math::Point3D Primitive::Triangle::getVertex1 () const

Get the vertex1 object.

Returns

Math::Point3D

3.29.2.7 getVertex2()

```
Math::Point3D Primitive::Triangle::getVertex2 ( ) const
```

Get the vertex2 object.

Returns

Math::Point3D

3.29.2.8 getVertex3()

```
Math::Point3D Primitive::Triangle::getVertex3 ( ) const
```

Get the vertex3 object.

Returns

Math::Point3D

3.29.2.9 hitPoint()

Return the hit point of the triangle.

Parameters

ray vector3D

Returns

Point3D

Implements Primitive::IPrimitive.

3.29.2.10 setMaterial()

Set the material.

Parameters

material New material to set

3.29.2.11 setRotation()

Set the rotation object.

Parameters

rotation - Rotation value

3.29.2.12 setTriangleInverseNormal()

Set the triangle inverse normal object.

Parameters

inverseNormal new value to set

3.29.2.13 setTriangleNormal()

Set the triangle normal object.

Parameters

normal new value to set

3.29.2.14 setVertex1()

Set the vertex1 object.

Parameters

vertex1 first edge of the triangle to set

3.29.2.15 setVertex2()

Set the vertex2 object.

Parameters

vertex2 second edge of the triangle to set

3.29.2.16 setVertex3()

Set the vertex3 object.

Parameters

vertex3 third edge of the triangle to set

The documentation for this class was generated from the following files:

- include/Primitives/Triangle.hpp
- src/Plugins/Primitives/Triangle/Triangle.cpp

3.30 Math::Vector3D Class Reference

Vector 3D class (x, y, z)

#include <Vector3D.hpp>

Public Member Functions

· Vector3D ()

Construct a new Vector 3D object.

Vector3D (double x, double y, double z)

Construct a new Vector 3D object.

• double x () const

return x coordinate vector

· double y () const

return y coordinate vector

• double z () const

return z coordinate vector

· double length () const

return the lenght of the vector

• double length_squared () const

return the square lenght of the vector

double dot (const Vector3D &ptr)

1 /

return the dot product with an other Vector

void translate (const Vector3D &ptr)

translate a vector with an other

void rotateZ (double degrees)

Rotate a vector with an angle on the axis Z.

void rotateY (double degrees)

Rotate a vector with an angle on the axis Y.

• void rotateX (double degrees)

Rotate a vector with an angle on the axis X.

Vector3D cross (const Vector3D &ptr)

Return the cross product with the vector.

- Vector3D operator+ (const Vector3D &ptr)
- Vector3D & operator+= (const Vector3D &ptr)
- Vector3D operator- (const Vector3D &ptr)
- Vector3D & operator-= (const Vector3D &ptr)
- Vector3D operator* (const Vector3D &ptr)
- Vector3D & operator*= (const Vector3D &ptr)
- Vector3D operator/ (const Vector3D &ptr)
- Vector3D & operator/= (const Vector3D &ptr)
- Vector3D operator* (double n)

- Vector3D operator/ (double n)
- Vector3D & operator/= (double n)
- bool **operator**== (const Vector3D &ptr)
- bool operator!= (const Vector3D &ptr)
- bool operator< (const Vector3D &ptr)
- bool operator> (const Vector3D &ptr)

3.30.1 Detailed Description

Vector 3D class (x, y, z)

3.30.2 Constructor & Destructor Documentation

3.30.2.1 Vector3D()

Construct a new Vector 3D object.

Parameters

X	position vector
У	position vector
Z	position vector

3.30.3 Member Function Documentation

3.30.3.1 cross()

Return the cross product with the vector.

Parameters

ptr	within do the cross product

Returns

Vector3D cross product

3.30.3.2 dot()

return the dot product with an other Vector

Parameters

ptr vector to dot with

Returns

double result of dot product

3.30.3.3 length()

```
double Math::Vector3D::length ( ) const
```

return the lenght of the vector

Returns

double

3.30.3.4 length_squared()

```
double Math::Vector3D::length_squared ( ) const
```

return the square lenght of the vector

Returns

double

3.30.3.5 rotateX()

Rotate a vector with an angle on the axis X.

Parameters

degrees - Rotation value

3.30.3.6 rotateY()

Rotate a vector with an angle on the axis Y.

Parameters

```
degrees - Rotation value
```

3.30.3.7 rotateZ()

Rotate a vector with an angle on the axis Z.

Parameters

```
degrees - Rotation value
```

3.30.3.8 translate()

translate a vector with an other

Parameters

```
ptr vector of translation
```

3.30.3.9 x()

```
double Math::Vector3D::x ( ) const
```

return x coordinate vector

Returns

double

3.30.3.10 y()

```
double Math::Vector3D::y ( ) const
return y coordinate vector
Returns
    double
```

3.30.3.11 z()

double

```
double Math::Vector3D::z ( ) const
return z coordinate vector
Returns
```
